

HOW CAN DIFFERENT TYPES OF EYE DOCTORS IN LUCKNOW HELP YOU?

When speaking of eye doctors, people often make the common mistake of referring to various types of eye doctors as the same. However, this is not the case; every eye doctor in Lucknow specializes in a particular field of eye care technology. Hence, the treatments they impart are different depending on the condition of the eyes. So, to avoid confusion and receive accurate treatments for your designated problem, you will need to have adequate knowledge about the different types of eye specialists. In this blog, you will learn about the different types of eye doctors and how they can help.

THE DIFFERENT TYPES OF EYE DOCTORS

Here's a comprehensive list of the different types of eye doctors and how they can help you:

OPHTHALMOLOGIST

The first on the list is an Ophthalmologist. An Ophthalmologist is a doctor affiliated with medical certification to perform surgical procedures. Along with performing medical eye care, they can treat a wide range of eye complications such as glaucoma, iritis, chemical burns, cataracts, etc. Often, health complications such as diabetes and arthritis can result in the development of critical eye issues, which can be readily treated by an ophthalmologist who is also regarded as an Eye Surgeon in Lucknow. An ophthalmologist is even certified to perform cosmetic treatments of the eyes, such as plastic surgery to remove wrinkles and stretch marks. Patients who require surgical solutions to their eye problems will need to consult an efficient eye surgeon as soon as possible.

OPTOMETRIST

After Ophthalmologists, Optometrists occupy an important position in the field of eye care. Optometrists specialize in primary vision care and can offer patients a wide range of medical services such as diagnosis of eye complications, correction of vision, and other eye-related issues. The primary treatment services offered by Optometrists include eye examinations, vision tests, implementing corrective lenses, correcting eye irregularities, visual rehabilitation, etc. Although Optometrists are not certified to perform surgical procedures, they can still conduct minor operations such as laser eye surgeries. Patients having trouble with their primary vision can readily seek the assurance of a highly affiliated Optometrist to get the best cure for their problem.

HOW IS AN OPTICIAN DIFFERENT FROM AN EYE DOCTOR?

Although not eye doctors, Opticians are regarded as eye specialists designated to help patients choose accurate vision-correcting devices to combat their eye problems. They might help you pick the spectacles or eye lenses perfect for your eye condition. However, although they are experienced professionals, they cannot diagnose or treat your problems. So, an Optician can only assist you in getting hold of the accurate vision-correcting device after receiving the prescription from a certified Ophthalmologist or Optometrist depending upon your requirements. So, post visiting an optician, consult the best eye Dr in Lucknow for maintaining good eye health.

CONCLUSION
